

Ciao Software's Kitchen Display Module Bringing the Power of POS into the Kitchen

Ciao's Kitchen Display Module provides your kitchen staff with real-time order information — no second guessing or misplaced paper tickets. Customer order information is displayed on a large flat screen monitor that is positioned so that all of your kitchen staff can view orders and status at a glance. With Ciao your kitchen staff will operate at peak performance through accurate information, better timing, and more efficient teamwork.

With Ciao's Kitchen Display Module, you can:

- Consolidate order tickets on one easy-to-read monitor — promoting greater efficiency in the food prep and cooking areas
- Display customer order changes instantly — minimizing waste from returns
- Respond to order surges — allowing managers to fine tune resources as needed
- Work with or without kitchen printers — reducing costs and saving premium space

KITCHEN DISPLAY

Ciao's Kitchen Display system uses a unique thin-client architecture that reduces cost while delivering the full power of Microsoft Windows™ to the kitchen.

With Ciao's optional seating detail, servers know exactly what meal was ordered from each seat at the table and can deliver it to the right spot without interrupting conversations. Customer no longer have to "vote" for their food.
